**Databases**

MySQL, Postgres, MongoDB, Firebase

**Tools**

Git, Github, JIRA, Docker, Heroku

## EDUCATION

**University of Penn**

Full Stack Development Program

**Ramapo College**

Bachelor of Arts

## IN SHORT..

Day-to-day I am an active player in the tech field, immersed in agile ceremonies, digital project management, and development, currently as an email marketing manager. I decided to pivot into web development through UPenn's Full Stack Bootcamp. Combining my creative and technical skillsets I build engaging, dynamic websites and applications with code that endures. My current passion is building in React and Django.

## WORKS

### RightMove   Github

An application built around intelligent career design.

- Building Django REST to React API
- Creating models and syncing with Postgres
- Creating algorithm to "score" jobs based on user input

*Django Rest, React, Postgres, Docker*

### Fetchr   Fetchr.net   Github

Customized dog breed matches based on your personality and lifestyle

- Built api and html routes in express
- Designed the database schema
- Built models and seed files with Sequelize
- Used Materialize and Handlebars to design a cohesive frontend
- Used Euclidean distance to power user/dog match algorithm

*Node, Express, Materialize, Handlebars, MySql, PetFinder API, Heroku*

### MealFlip   Mealflip.net   Github

A fun way to answer the "What should we do for dinner tonight?" question.

- Used Materialize and CSS animations to create an interactive frontend
- Used Firebase Realtime Database and Auth to store user data
- Used axios to make calls to Yelp and Yummly for content generation
- Used the Google Maps API to allow users to take action on content

*Firebase, Yummly API, Yelp API, Google Maps API*

## EXPERIENCE

**DMi Partners**  2019 - Present
Email Marketing Manager

- Project manage and develop emails for multiple clients within the agency

**Fanatics**  2018 - 2019
Email Marketing Manager
